Days

Oct 2016 – Sep 2017

7,826

Unique drivers

SUV/Sedan/Van

Empirical Strategy

The diagram illustrates the Two-Stage Heckman + IV + FE model. At the top, the text "Two-Stage" is written in black. Below it, "Heckman + IV + FE" is written in large black letters. Three vertical red lines descend from the center of each word to labels at the bottom. The first line is under "Heckman" and is labeled "Sample Selection" in red. The second line is under "IV" and is labeled "Simultaneity" in red. The third line is under "FE" and is labeled "Heterogeneity" in orange.

Empirical Strategy

Heckman + IV

1

Work or not?

Control Function Probit:
 $P(\text{drive}) \text{ on Offer} + \text{Promo}$

IVs: Average of Lagged
 others' offers 1-week

Income
Target

Income Target:
The more you earned,
the less likely you'll work
a new shift.

The negative impact of
income target kicks in
later in the day.

Results Within Day

1

Work or not?

	Offer	ISF	HSF
Midday	+	+	+
PM peak	+	-	+
PM off	+	-	+
Late night	+	-	+

Income
Target

Inertia

Inertia: The longer you've been active, the more likely you'll work another shift.

Inertia has a consistently positive impact.

Results Within Day

encourages working

Implications **Targeted Incentives**

Compared to current practice from Jan to Sep 2017 out-of-sample

Implications Targeted Incentives

Compared to current practice from Jan to Sep 2017 out-of-sample

Given the same budget

Can recruit **17% more workers**

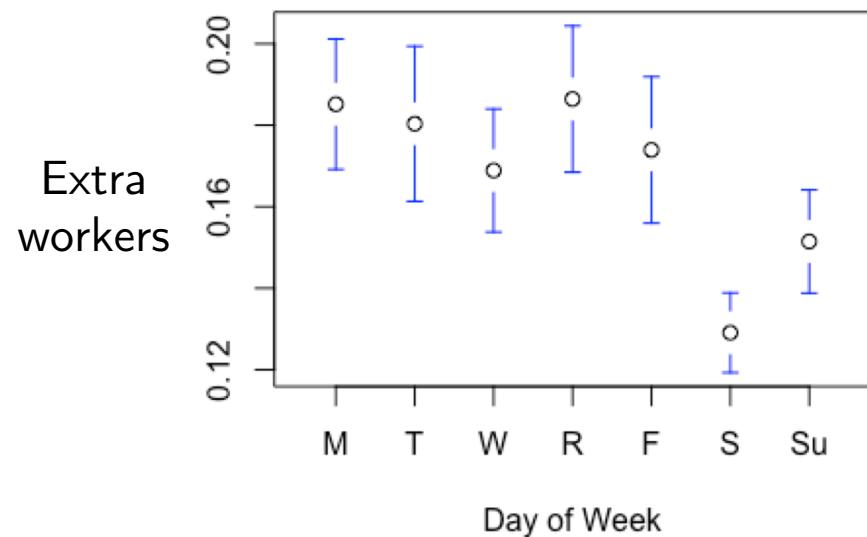

Average promo: 1.61x

Implications

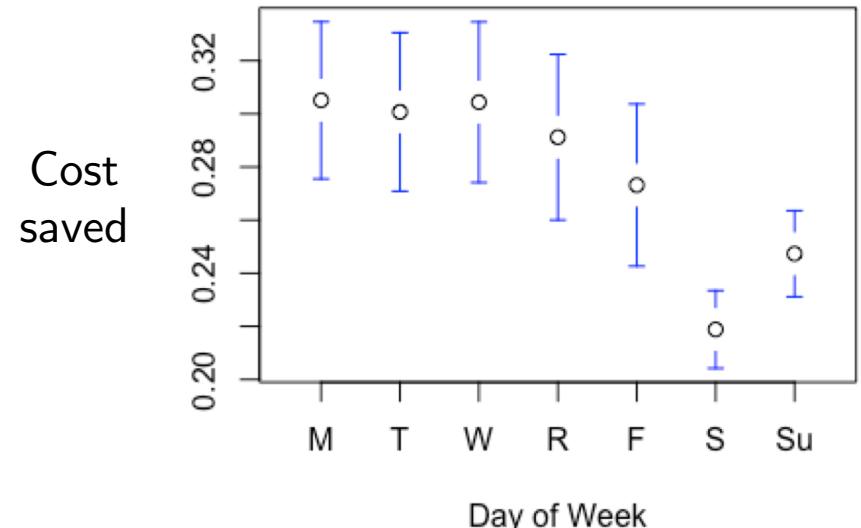

Targeted Incentives

Compared to current practice from Jan to Sep 2017 out-of-sample

Given the same budget

Given the same capacity

Can recruit **17% more workers**
Average promo: 1.61x

Costs 28% less to maintain capacity

Summary

How do gig economy workers make labor decisions?

Approach

- Shift-level data from ride-hailing company
- Modified Heckman estimation w/ IVs and fixed effects

Findings

As day/week proceeds...

Neoclassical

Financial Incentive

encourages working

Behavioral

Income Target

discourages working later on

New phenomenon

Inertia

encourages working

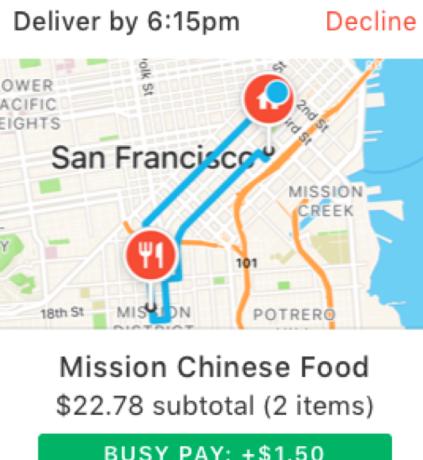

Implications

- Compared to current practice, our approach can improve service capacity without incurring extra cost or maintain the same capacity at a lower cost

“You’re so close to your precious target”

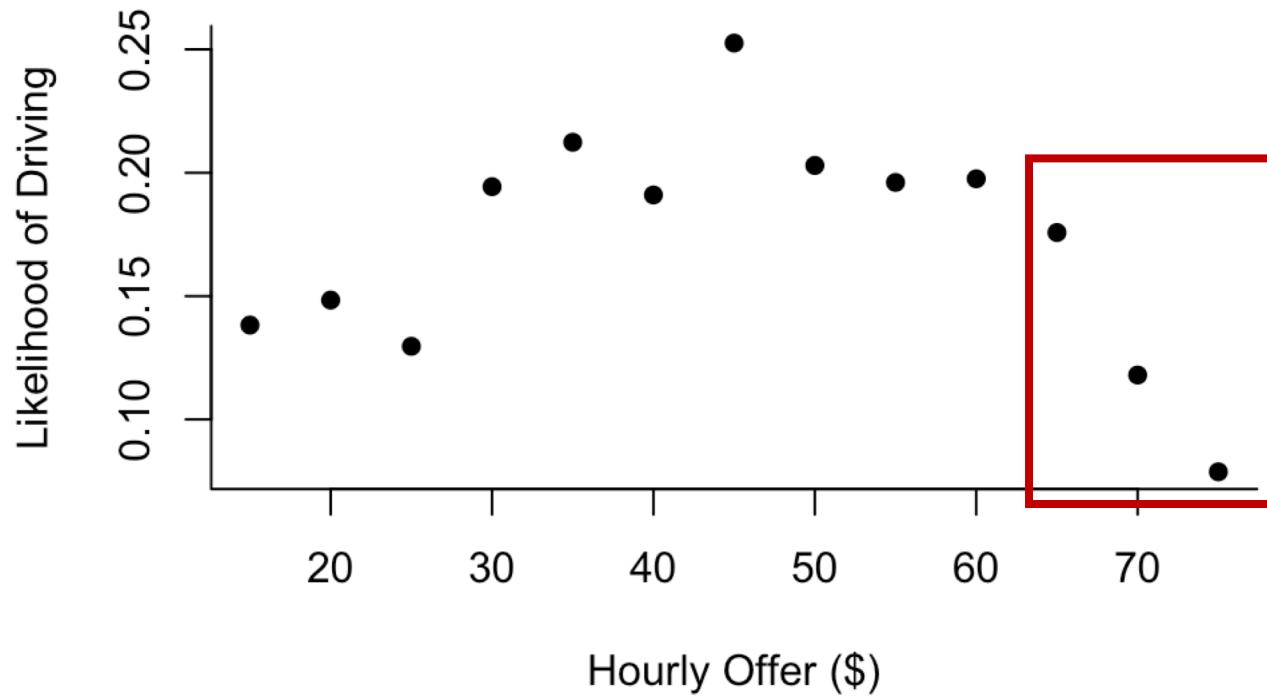

How Uber Uses
Psychological Tricks to
Push Its Drivers' Buttons

Theories of Labor Supply

Challenges

Simultaneity

Higher wage, less likely to drive?

Use higher wage to attract inactive drivers

Challenges

Simultaneity

Solution: Instrumental Variables

- **Offer:** Average of other drivers' offers (Hausman 1996, Sheldon 2016, Xu et al 2017)
- **Promo** (binary): Lagged value from the same shift in the previous week
(Villas-Boas & Winer 1999, Yang et al 2003, Archak et al 2011, Ghose et al 2012)

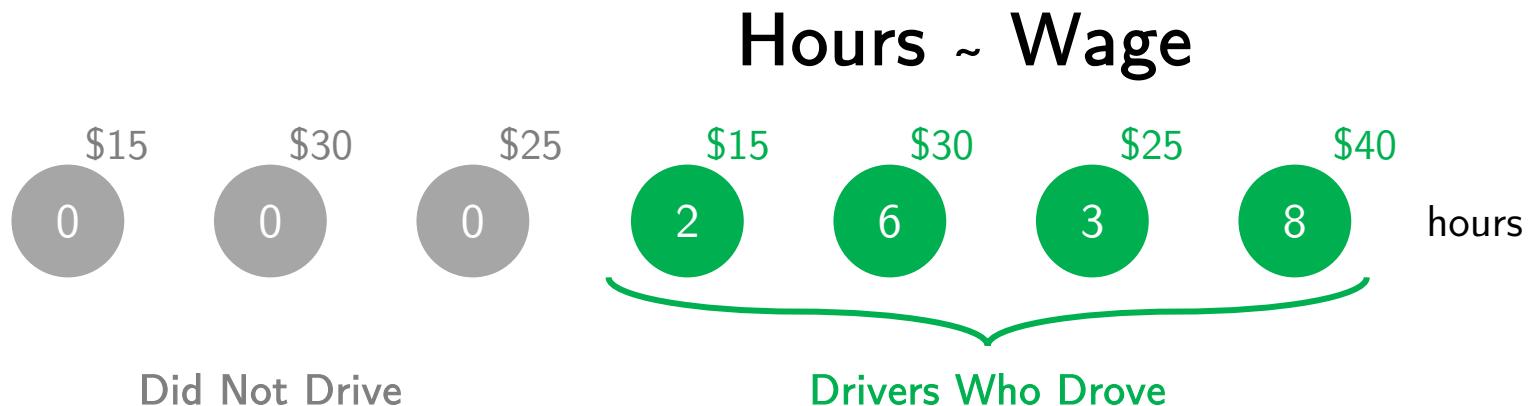

Challenges

Simultaneity

Solution: Instrumental Variables

Selection Bias

Solution: Heckman Two-Stage Method
("Heckit" - Heckman 1979)

Heckit with IVs

1. Choice Equation “Drive or not?”

CF: Regress hourly offer/promo on IVs. Keep residuals

Probit: Estimate $P(\text{drive})$

$$P(\text{Drive}_{i,t} = 1 | \mathbf{X}_{i,t}) = \Phi(\alpha_{0,t} + \alpha_w w_{i,t} + \alpha_\psi \psi_{i,t} + \boldsymbol{\alpha} \mathbf{X}_{i,t} + \alpha_e \hat{e}_{i,t})$$

C

Inverse Mills Ratio (IMR)

$$\lambda(c_z) = \frac{\phi(c_z)}{1 - \Phi(c_z)}$$

Conditional on driving

2. Level Equation “How long?”

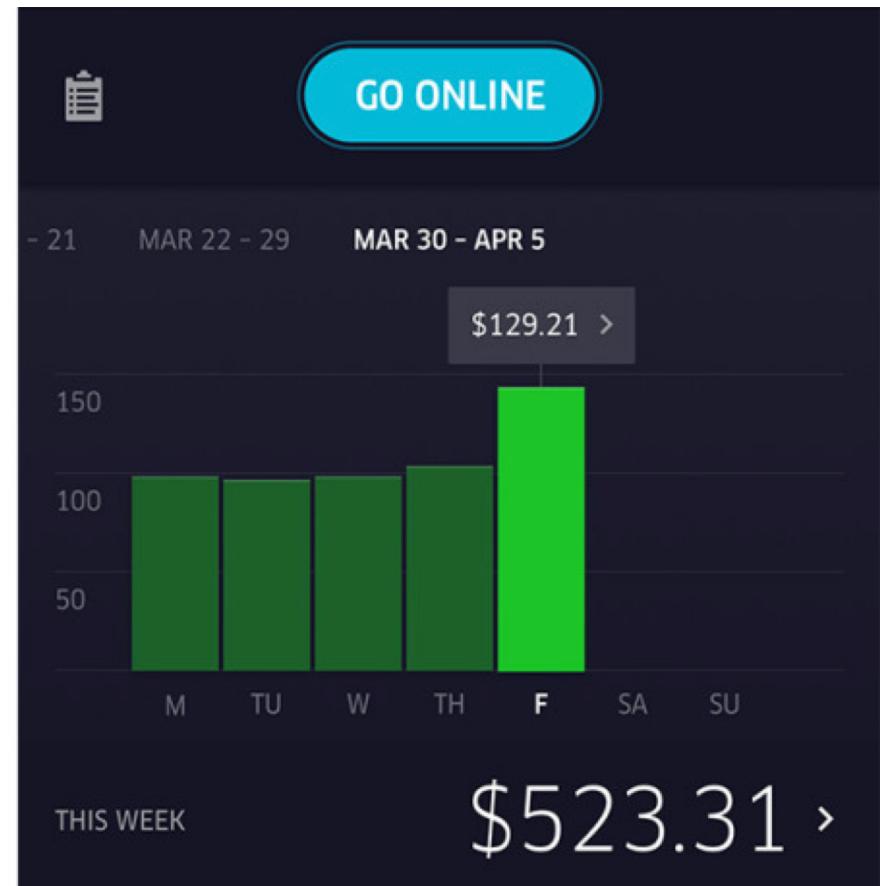

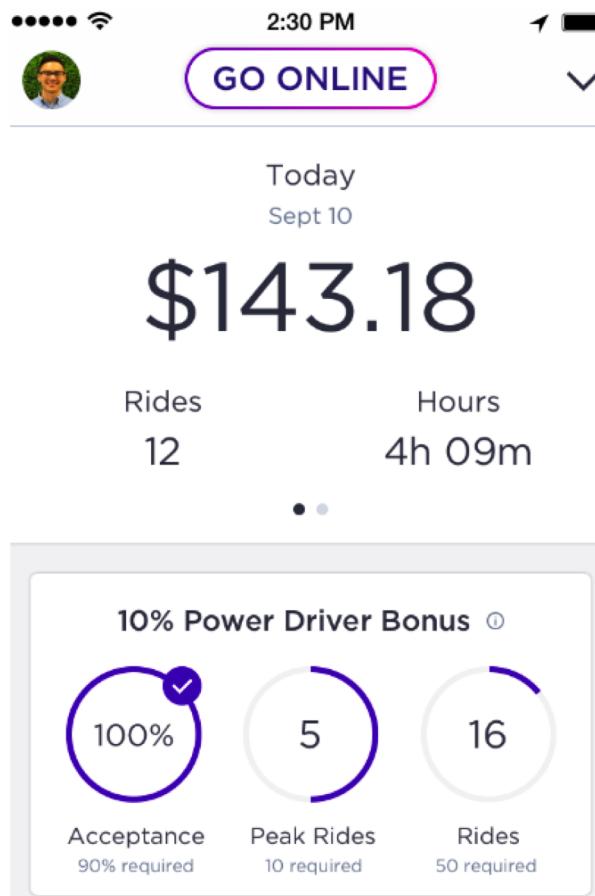

IV: Estimate hourly earning from IVs

OLS: Estimate hours

$$f(\text{Hour}_{i,t}) = \beta_{0,i} + \beta_w w_{i,t} + \boldsymbol{\beta} \mathbf{Z}_{i,t} + \theta \lambda_{i,t} + u_{i,t}$$

L

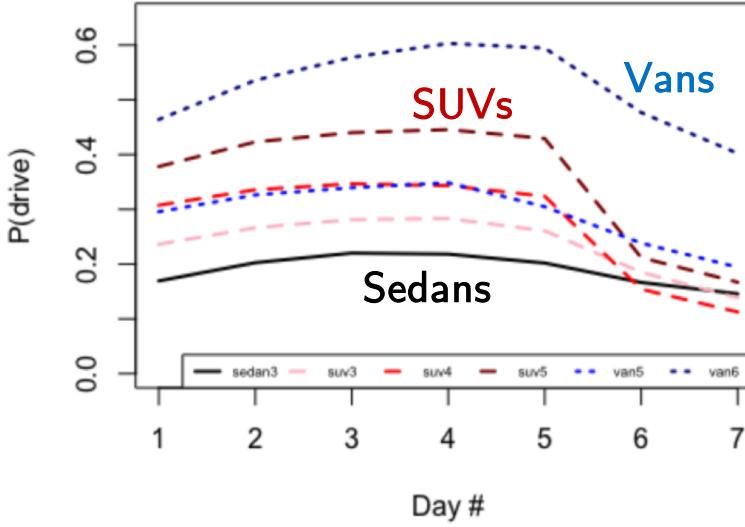

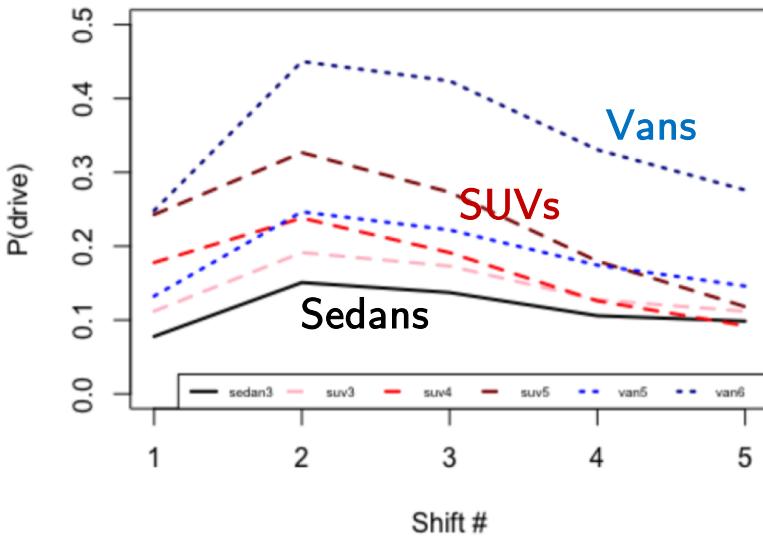

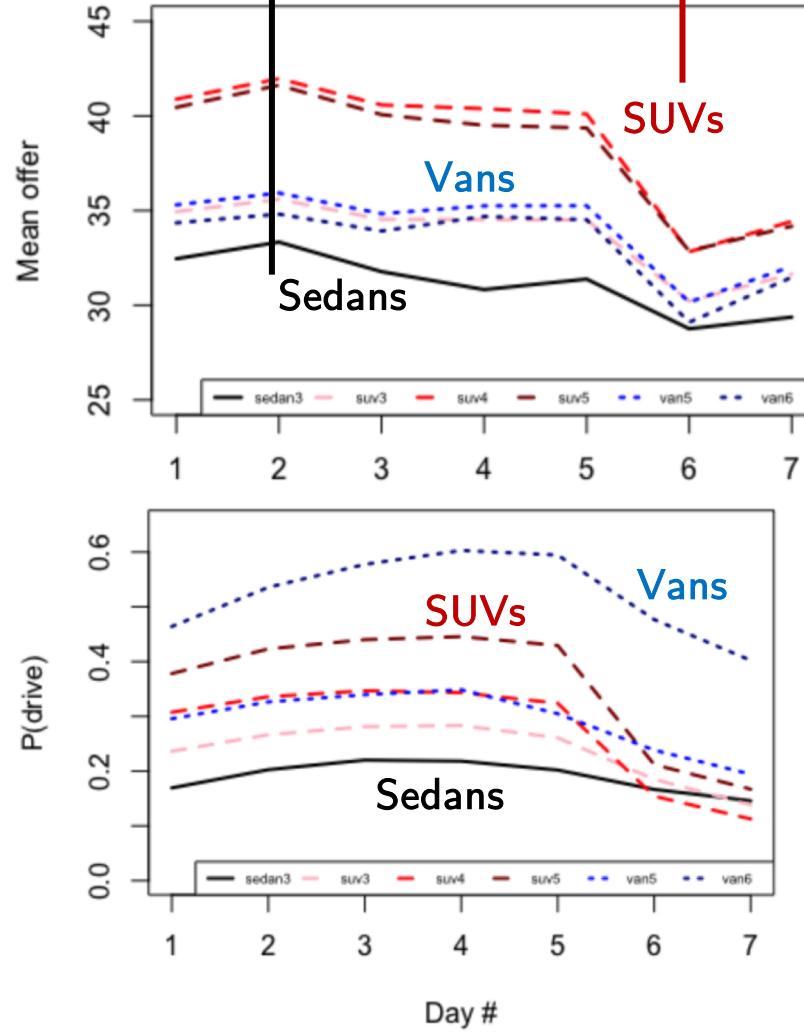

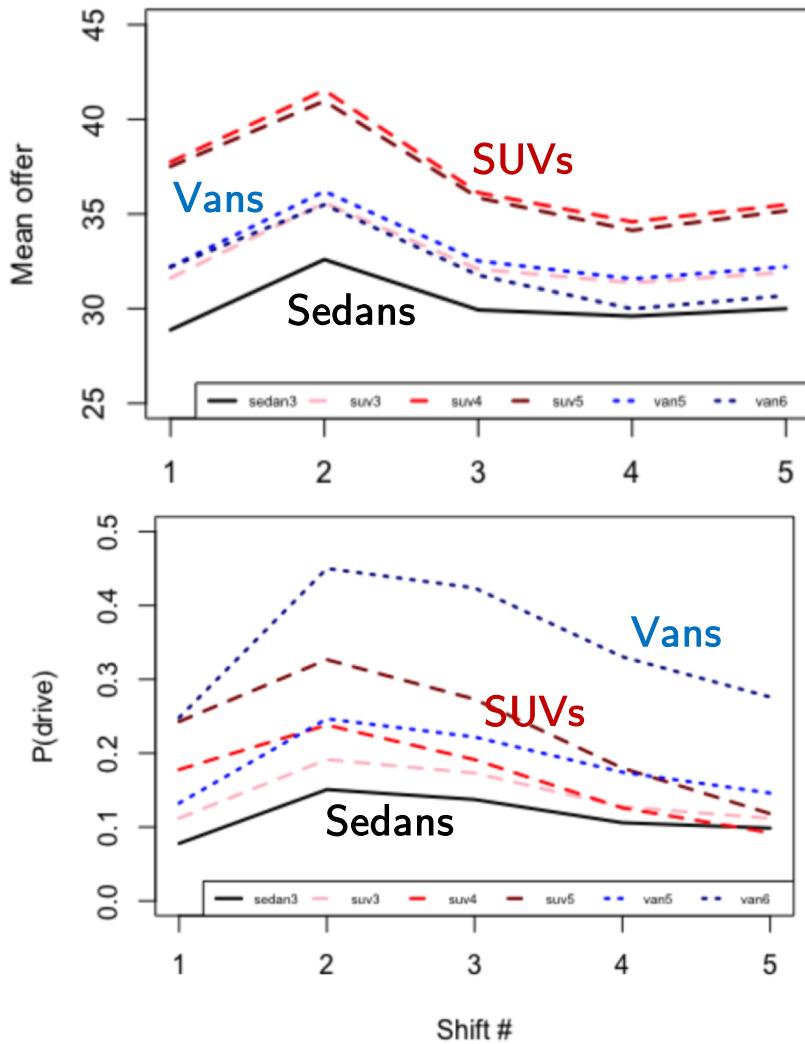

Salience of ISF/HSF

Drivers

5.33 hrs/day, 12.65 hrs/wk

4.86 hrs/day, 5.86 hrs/wk

Who Should Get Bonuses?

Ranking each driver by her
minimum work-inducing incentive
= how much to trigger working decision

Gig Economy x Retail

- **Retail candidates value flexible shift patterns** and shorter work weeks over compensation and benefits.
- Benefits of adopting flexible workforce: **Seasonality, resolving high turnover, matching consumer trend, high quality/fresh perspective**
- Many have already adopted/worked closely with gig companies
 - Delivery business: Walmart x Uber/Lyft, GM x Lyft, Apple x Didi
 - Flexible staffing: IKEA x TaskRabbit, Samsung x Upwork
